

new project let's see where the background music is here okay and this is the one that jumps out at me.

ok it would be already then short view you see the browser no I have done that a pano I have put a project add background music and it adds it, tell me if it can be heard if it is ok then I got the little message in preload be ready we do short view there at the being ready, it skips the preload and tells me wait, I have an audio.

then that play comes out then that's the same cover that.

It has the two templates that we have designed.

Seeing the tour or entering already makes us able to activate the music.

Let's try what you say first..

yusep we have the container, you say no to one? yes, the most or the least something that has zeroed us and that's it.

001 and then this, action play musical to click music play it is not background music not tiki tiki tiki play and that's it and hide we do a short view I will give you the notice I have a container at 001 of transparency and I click on it and I told you that play the audio.
